

Safe Time

Temporary labour supplier management

www.safecomputing.co.uk

Looking to engage directly with your labour suppliers ?

Safe Time is a cloud based solution designed specifically for employers of temporary labour to engage with and manage the suppliers they use. We host and deliver the technology that enables you to:

- Create and manage a bank of suppliers
- Deliver on-site access to the local hiring manager to define roles and rates
- Manage the entry of time and expense information against rules you can define
- Produce a consolidated timesheet back to each agency, which they then use to invoice you
- Be aware of the AWR parity situation as you have real time hours worked
- Ensure minimum levels of compliance checks have been completed such as right to work

Scalability

Whether you are just looking for a solution to manage a few local agencies for a single local site, or a network of suppliers for multiple sites, Safe Time can scale to meet your needs. We have no upper or lower limit on transactions and users on the platform, so we can flex to meet your changing requirements.

Expertise

Safe is one of the UK's leaders in technology solutions to the recruitment market and specialise in the complex transactions between suppliers and the end hirer. Safe Time takes this expertise and applies it in a cloud delivered approach that enables any hirer of temporary labour to quickly engage with and manage the supply chain.

Low outlay

Being a cloud based solution we are not installing software on your premises and you do not have to think about IT systems and deployment issues – all of this reduces the cost of hiring your resources. Better still, apart from the initial setup, you only pay for what you use as we charge on a per transaction processed basis.

Think about it – no technology to manage, no software to buy, no hassle from an IT perspective. Just a great platform for you to manage the agencies that supply you with temporary staff.

Safe Time

Cloud based agency supply management system

On-site client locations

- Input and authorise time
- Input and authorise expenses
